MEDIA ADVISORY **(News Release Follows Below)**

BISMARCK, N.D. – To answer media questions about influenza activity in the state, the North Dakota Department of Health will hold a telephone media availability Thursday, Jan. 15, 2004, at 2 p.m. The following department officials will participate in the 2 p.m. conference call:

- Dr. Craig Lambrecht, state medical officer
- Larry Shireley, state epidemiologist
- Heather Weaver, Immunization Program manager
- Melissa Casteel, Influenza Surveillance coordinator

To connect to the conference call, the media is asked to follow these steps:

- 1) Dial 866.262.1846.
- 2) Once you are connected, enter *3282378*. (Please note: The star key must be pressed before and after the pin number.)
- 3) If you have trouble connecting, call the help desk at 800.263.3863 option 2.

This is the last regularly scheduled influenza conference call; however, weekly updates of influenza cases will continue to be released each Thursday throughout the season.

State Health Department Reports 1,590 Cases of Influenza

Influenza Update #6 – Jan. 15, 2004

BISMARCK, N.D. – The North Dakota Department of Health today announced that 1,590 cases of influenza have been reported in the state, up from 1,459 reported last week.

The following is a breakdown by age of the influenza cases reported to the department:

- Younger than 10 – 658
- Ages 10 to 19 – 332
- Ages 20 to 29 – 186

- Ages 30 to 39 – 90
- Ages 40 to 49 – 57
- Ages 50 to 59 – 50
- Age 60 and older – 217

The Department of Health and local public health units recently purchased additional doses of injectable vaccine from the Centers for Disease Control and Prevention. The Department of Health obtained 500 doses for people age 4 and older and will offer the doses to private and public health-care providers in need of vaccine. In addition, some local public health units that purchased the same type of vaccine will have it available soon.

“Because the influenza season may very well continue for weeks, we are still encouraging people to get vaccinated,” said State Epidemiologist Larry Shireley. “These additional doses will help us vaccinate more people, especially those at high risk of developing complications from the flu. Healthy people between the ages of 5 and 49 still can receive the FluMist™ nasal vaccine. Anyone seeking to be vaccinated for influenza should contact his or her health-care provider or local public health unit to see if vaccine is available.”

The department recommends that people in the following high-risk groups receive a flu shot:

- Children ages 6 months through 23 months
- People age 65 and older
- Adults and children who have a chronic health condition, such as heart disease, diabetes, kidney disease, asthma, cancer and HIV/AIDS
- Women at least 14 weeks pregnant during the flu season

To prevent the spread of influenza, the department urges everyone to:

- Wash hands frequently with soap and water. Hand washing is one of the best preventive measures, not only for influenza, but for all diseases.
- Use good respiratory manners. Cover your mouth and nose with a tissue when sneezing or coughing.
- Stay home from work or other recreational activities when you’re ill. This will help prevent the spread of influenza to your friends, coworkers and family.

Common signs and symptoms of influenza include abrupt onset of fever, muscle aches, sore throat and cough.
